

## What's New In Kurogo 2.3

### Kurogo Core Updates

- **Web Fonts** allow you to make a visual impact. Google and Typekit fonts can now be installed and used in the Kurogo UI.
- **Module Favoriting** - Users can now designate modules that they always want to appear at the top of the home screen and navigation menu, making it easier than ever to quickly find what they want.
- **Improved Flash Emergency Messaging** - Home screen alert messages can now be dismissed by the user once they are read. New icons and styling are also available.

## Publisher Updates

Publisher just keeps getting better and easier to use. Here are some exciting new enhancements that can take your app to the next level.

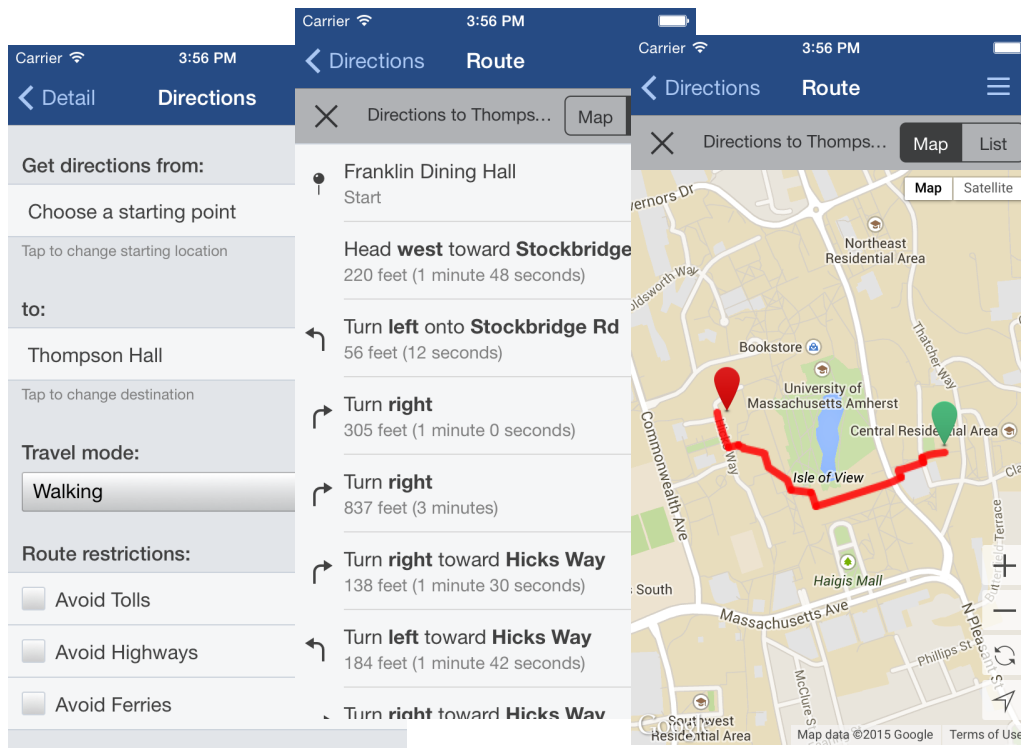

- **Content searching** is now more comprehensive than ever and includes results from Publisher-Based modules, as well as facilities, indoor maps and header and footer content.
- Our **Publisher template** library continues to grow. The latest template called Spectra, couldn't be any more unique and will allow you to create a special look for your university. Touch and hold the screen to get more detailed information about each module.

The Spectra Publisher template allows you to create a unique look (left). Touch and hold the screen for more detailed information about your modules (right).

## Map Update

- **Pathfinding** allows you to create paths from one campus location to another, and to provide turn-by-turn directions. (For Map modules based on Google Maps, path data is provided via Google Maps data.) Using Pathfinding, it is now simple to direct users to the best path, whether it's for student move-in day, emergency evacuation routes, or any other purpose.

Pathfinding allows users to find the best path.

## Admin Console Updates

- **Expanded Admin Roles** - Now you can share different levels of administrative access to designated module and feed configurations, so anyone can safely make changes or update your app.
- **Improved Deployment Workflow** - Efficiently roll out your app changes with an improved deployment workflow. Deploy only those modules that are ready for prime time, and keep those that aren't undeployed.

**Edit Module**

Display name \*   
Display name for this module.

Admin label   
Optional display name shown only to administrators, to help identify items with the same or similar names.

Module type:

Path:

Status   
Ready for production  
In progress  
Disabled
